

**Machines should work;  
people should think.**

# Programs = Algorithms + Data Structures

- **Programming** is process of writing instructions that get executed by computers
  - → Recipe how to cook an apple pie with creams
- **Algorithms** are sequence of instructions for approach to a class of problems
  - → Generic instruction how to cook a pie
- **Data structures** are used to facilitate algorithms
  - → Ingredients for a recipe

# JSON: JavaScript Object Notation

- JSON is a syntax for storing and exchanging data
- JSON is text, written with JavaScript object notation
  - Easy to handle by *both* people and computers
  - Readable and correspond to data structures
  - Allows for complex, hierarchical data

```
{  
  "first name": "John",  
  "last name": "Smith",  
  "age": 25,  
  "address": {  
    "street address": "21 2nd Street",  
    "city": "New York",  
    "state": "NY",  
    "postal code": "10021"  
  },  
  "phone numbers": [  
    {  
      "type": "home",  
      "number": "212 555-1234"  
    },  
    {  
      "type": "fax",  
      "number": "646 555-4567"  
    }  
  ],  
  "sex": {  
    "type": "male"  
  }  
}
```

# API: Application Programming Interface

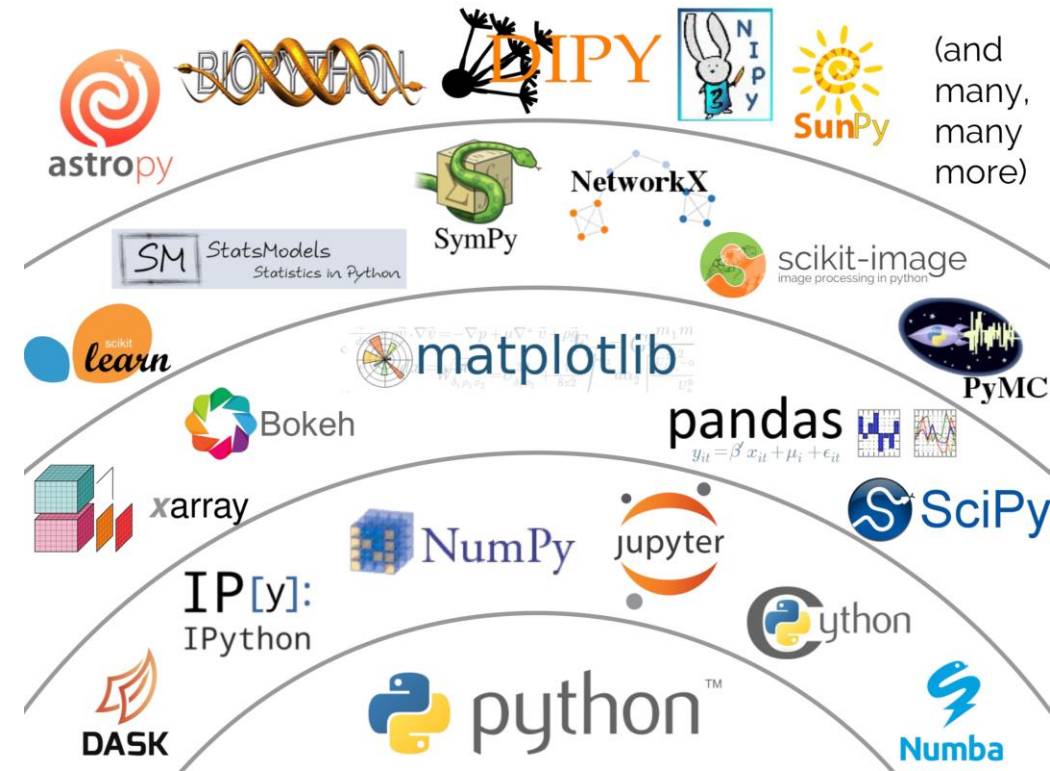

- The way to talk between programs
- API is like a waiter:
  1. Receives a set of instructions (a request) from a source (such as an application or engineer)
  2. Takes that request to the back office
  3. Fetches the requested data or facilitates a set of actions
  4. Returns a response to the source
- Examples:
  - UNSTAT SDG <https://unstats.un.org/SDGAPI/swagger/>
  - WorldBank Data <https://bit.ly/2PXySTS>

# Python

- Python is an **interpreted**, **high-level**, general-purpose programming language
- Pros:
  - Simple and easy-to-understand syntax
  - Good data structures
  - Extensive library
  - Open Source and large community support
  - *Superman* of Data Science
  - (...and **R** is *Batman* of Data Science)
- Cons:
  - Python is s...l...o...w...
  - Since Python is dynamic, more errors show at run-time.

# open.undp.org

inequalities and exclusion around the world. Discover how, with the help of our partners, we work
